

Enphase Energy Module Compatibility List - Updated 11/9/10

The modules on this list have been verified for electrical compatibility with Enphase Microinverters over the cell temperature range of -25C to +75C. This document is intended as a means of reference and is not an exclusive list of compatible modules. For applications outside of this temperature range, the system designer should verify that the module voltage and/or current will not exceed the microinverter model's nameplate ratings under all expected environmental conditions. The module specification sheet contains all of the necessary module information to make this determination. The ASHRAE Handbook is the recommended source for weather data for a particular location.

* The appropriate module power rating for a given application depends on the specifics of that installation. The "Module Rightsizing" white paper, available from the Enphase downloads page, outlines the specific factors considered when determining optimum module power rating. It also provides a comparison of energy harvest of 216W and 235W modules in three different geographic locations. This white paper demonstrates that with the best location, optimum tilt, and regular cleaning, a 235W module paired with a 190W microinverter lost 0.61% of the maximum potential energy harvest.

A generally accepted practice is to use a module with an STC power rating of 1.2 times the ac power output rating of the inverter. Many system designers use a multiplier of 1.25 or 1.3. For an M190 this would suggest a module power rating of 228 to 250 watts. The correct multiplier for your application will depend on the specifics of the installation, as outlined in the "Module Rightsizing" whitepaper.

DC Connectors: Please note that Enphase Microinverters must be ordered for specific module connector types:

Connector Type	Enphase SKU
MC4 Locking	-S12
Tyco SolarLok	-S13

MC-4 compatible (S12) connectors:

- Positive DC output of the PV module (+) connects to microinverter connector labeled negative (-).

Tyco (S13) connectors:

- Positive DC output of the PV module (+) connects to microinverter connector labeled positive (+).

It is important to verify the correct connector type when purchasing from your distributor.
